To whom it may concern,

TECHNOMETAL – Orfanidis Sons V. co. was involved in dismantling of 2 gear boxes in Small Hydro plant of Eleoussa (TERNA-Power Public Corporation sa) during 2010.

More specific, the company, as a sub-contractor, assisted personnel of Lufkin France (manufacturer of gear boxes) in dismantling pinion gears, bearings, pumps, covers etc, re-conditioning (machining, coating by method of cold thermal spray, finished machining and cylindrical grinding) of pinion geared shaft, manufacturing of spare parts according to Lufkin's drawings and assembly of the gear box. Works took place both in Eleoussa's and in TECHNOMETAL's premises and were monitored by Lufkin's and Andritz engineers.

Works were carried out successfully and for that reason, in 2011, TECHNOMETAL was ordered to manufacture spare parts for another gear box of Lufkin, installed in a hydro plant of TERNA sa.
